SEO Report Onboarding

To write your report we need access to the tools below. If you don't use one yet, we recommend setting it up. Reply to our email once you're done. Every role is read-only, except where GitHub doesn't offer one.

01 Google Search Console

HIGHLY RECOMMENDED

search.google.com/search-console

Why Search Console: what people search to find you, where you rank, and what Google has indexed.

Pick your site's **Domain** property (the one without https://), go to **Settings → Users and permissions → Add user**, and add `analytics@freethedesk.iam.gserviceaccount.com` as **Restricted**. Then add `analytics@freethedesk.com.au` the same way.

02 Google Analytics

HIGHLY RECOMMENDED

analytics.google.com

Why Analytics: where your visitors come from and what they do once they arrive, from pages viewed to enquiries sent.

Pick your property, go to **Admin → Property access management**, click the blue **+** at the top right, choose **Add users**, and add `analytics@freethedesk.iam.gserviceaccount.com` with the standard role **Viewer**. Then add `analytics@freethedesk.com.au` the same way.

03 Microsoft Clarity

OPTIONAL

clarity.microsoft.com

Why Clarity: heatmaps, session recordings and scroll depth, which show where people click, read and give up.

Pick your project, go to **Settings → Team → Add team member**, and add `analytics@freethedesk.com.au` as **Member**. If the project records more than one site, tell us which is yours.

04 Google Ads

RECOMMENDED

ads.google.com

Why Google Ads: what your ads cost, which searches they show for, and what they bring in.

Go to **Admin → Access and security → Users**, click the blue **+**, and add `analytics@freethedesk.iam.gserviceaccount.com` with **Read only** access. Then add `analytics@freethedesk.com.au` the same way. If Google says the address isn't in an allowed domain, add `freethedesk.com.au` under **Security → Allowed domains** first.

05 GitHub

OPTIONAL

github.com

Why GitHub: when and what changed on your site, so a rise or fall can be tied to the change behind it.

If your site's code is in a private repository, open it and go to **Settings → Collaborators** (or **Collaborators and teams**), click **Add people**, and add `analytics-freethedesk`. If the repository belongs to an organisation, choose the **Read** role. If it's on your personal account, GitHub doesn't offer read-only access there, but we only ever read.

06 Other tools on your site

OPTIONAL

Why other tools: bookings, chats and enquiries fill in what the others can't see.

If anything else records data of any kind and you're happy for us to see it, we'd like access. Add `analytics@freethedesk.com.au` with a view-only role.
